Windows 10 Wireless Connection Issue

Not Connecting to SUNYBroomeConnect

You need to edit the registry in order to correct an issue created by Microsoft in one of their updates to EAP

To add these registry values, follow these steps:

1. In the Search bar at the bottom, left of the screen, type **regedit** then press enter key. Click **YES** to open the registry.

2. Locate and then click the **>** next to each subkey in the registry to expand it:
   - ➔ **HKEY_LOCAL_MACHINE**
   - ➔ **SYSTEM**
   - ➔ **CurrentControlSet**
   - ➔ **Services**
   - ➔ **RasMan**
   - ➔ **PPP**
   - ➔ **EAP**

   Then click 13

3. On the **Edit** menu, point to **New**, and then click **DWORD Value**

4. Type TlsVersion for the name of the DWORD value, and then press Enter.

5. Right-click **TlsVersion**, (Note: that is T then lower case L) and then click **Modify**

6. In the **Value data** box, select **Decimal** and enter value of **192**

7. Restart your PC/Laptop
